SQL Workbench/J User's Manual

Table of Contents

1. General Information	7
1.1. Program version	7
1.2. Feedback and support	7
1.3. Credits and thanks	7
1.4. Third party components	7
2. Software license	9
2.1. Definitions	9
2.2. Grant of Copyright License	9
2.3. Restrictions (deviation of the Apache License)	10
2.4. Grant of Patent License	10
2.5. Redistribution	10
2.6. Submission of Contributions	11
2.7. Trademarks	11
2.8. Disclaimer of Warranty	11
2.9. Limitation of Liability	11
2.10. Accepting Warranty or Additional Liability	11
3. Change log	12
4. Installing and starting SQL Workbench/J	15
4.1. Pre-requisites	15
4.2. First time installation	15
4.3. Upgrade installation	15
4.4. Starting the program from the commandline	15
4.5. Starting the program using the shell script	16
4.6. Starting the program using the Windows® launcher	16
4.7. Configuration directory	17
4.8. Copying an installation	17
4.9. Increasing the memory available to the application	18
4.10. Command line parameters	18
5. JDBC Drivers	23
5.1. Configuring JDBC drivers	23
5.2. Connecting through ODBC	23
5.3. Specifying a library directory	24
5.4. Popular JDBC drivers	24
6. Connecting to the database	26
6.1. Connection profiles	26
6.2. Managing profile groups	26
6.3. JDBC related profile settings	27
6.4. PostgreSQL connections	28
6.5. Extended properties for the JDBC driver	28
6.6. SQL Workbench/J specific settings	28
6.7. Connect to Oracle with SYSDBA privilege	33
7. Editing SQL Statements	34
7.1. Editing files	34
7.2. Code completion	34
7.3. Show hints for INSERT statements	35
7.4. Customizing keyword highlighting	35
7.5. Reformat SQL	35
7.6. Create SQL value lists	36
7.7. Programming related editor functions	37

SWBAT: Identify independent and dependent variables. Write an equation in function notation and evaluate a function for given input values.

Writing Functions

Identify the independent and dependent variables. Write a rule in function notation for the situation.
A fitness center charges a \$100 initiation fee plus \$40 per month.

Independent versus Dependent Variable

An **independent variable** is the one thing you intend to vary in an experiment, "what's being tested"

A **dependent variable** is the thing that will change that you **intend** to measure at the end, "what do you want the results to be"

In the following examples identify the independent and dependent variables and then also list several potential confounding variables that the experimenters would have to consider.

Sample Hypotheses

1. If skin cancer is related to ultraviolet light, then people with a high exposure to UV light will have a higher frequency of skin cancer. What will you do to test this proposal? What will you vary or change? What will you measure?

Independent variable – UV Light

Dependent variable – Higher exposure to UV light will cause a higher frequency of skin cancer

2. If leaf color change is related to temperature, then exposing plants to low temperatures will result in changes in leaf color.

Independent variable – plants

Dependent variable – change in leaf color

4. If photosynthesis is related to light energy, then the portions of a leaf shaded from light will test negative for starch, since starch is a product of photosynthesis.

Independent variable – leaf

Dependent variable – test negative for starch

5. If animal metabolism is related to temperature, then increasing resting room temperature will increase animal metabolism (as measured by carbon dioxide gas production which is one of the waste products of animal metabolism).

Independent variable – animal metabolism

Dependent variable – Increase of metabolism based on the increase resting room temp

Independent variable dependent variable control constant worksheet answers.

This should only be used for debugging purposes. HOUDINI_RMAN_CURVE_BASIS Obsolete control. Thus, the variable should be set to some very small floating point number. On OSX this variable has no effect. Why? This variable is used in favour of the system environment variable HTTP_PROXY and HTTPS_PROXY. This is what we are observing and measuring. HOUDINI_CONDENSE_HIP If this variable is set Houdini will attempt to make paths entered "friendly" by replacing portions of filename paths with \$HIP if it's appropriate. Setting this path will override the default path of \$HOUDINI_PATH/ocl/. Note that "full" will cause mantra to consume an Engine license (not a Render license). A PDG license will always be tried first. 3DNow is available in AMD Athlon and Cyrix CPUs. 3DNow is not used if the CPU supports SSE (which is any Athlon XP, MP, 64 or Opteron). HOUDINI_TRANSFORM_MOTIONCLIP When this is enabled, the results of evaluating a MotionClip will be transformed by the intrinsic transform matrices of its packed geometries. This amount is specified in mega-bytes. HOUDINI_HIP_FROM_PATH When loading .hip files, force the Houdini HIP variable to the path of the HIP file specified rather than the HIP variable set inside hip file. It currently does not support deep images. HOUDINI_RAT_LOCALCACHE Specifies the size of the local texture disk cache in MB. HOUDINI_HDADYNAMICLOAD_CACHESIZE For loading HDA payloads in USD. This environment variable exists solely as an escape hatch to allow illegal behavior. This includes (but not limited to) the Look At parameter in all operators, the mlookat() expression function, and the lookat() VEX function. It is recommended that you set this variable with os.envIRON, but you must do so before importing the hou module. HOUDINI_NO_ENV_FILE_OVERRIDES This environment variable is similar to HOUDINI_NO_ENV_FILE, but is less extreme. HOUDINI_VEX_MODULECACHESIZE Sets the number of LVM modules cached by VEX. A value of 100 will provide the default of 85 dpi. A variable is any factor, trait, or condition that can exist in differing amounts or types. The following values can override this behavior: pdg_only Only use PDG license. HOUDINI_MANTRA_LIC_OPT Defines the list of options to apply to all Mantra Applications. 1 Houdini and MPlay will use native file choosers for their File > Open... items in their main menus. Houdini searches these files at startup to register viewer handles. HOUDINI_CORE_LIC_OPT Defines the list of options to apply to all Houdini Core Applications. HOUDINI_VEX_JIT_OPTIMIZE Specify JIT optimizations for VEX compilation. This variable allows you to limit the number of simultaneous system file handles that are open for each texture. HOUDINI_PATHMAP This string defines multiple mappings represented as a Python-style dictionary. This variable is the percentage of total device memory to allocate for the pool. On Windows and Linux, this defaults to the expanded value of \$HOME/houdini_HVER . HOUDINI_RIBTEMP_DIR This variable specifies the directory where Houdini should put RenderMan intermediate (i.e. source and error) files while generating compiled shaders from VOP Networks. The value of this variable has different levels of name mangling. This often happens internally to .hip files in locations such as OPIlibraries. Specify the curve interpolation when generating RCurve primitives in a RIB stream. HOUDINI_UNREAL_PLUGIN_LIC_OPT Defines the list of options to apply to the Unreal Plugin. performance Issues affecting performance portability Legal uses of OpenGL on this platform that may not work on others undefined Use of OpenGL whose behavior is not defined by the OpenGL specification deprecated Use of OpenGL features that are deprecated (legacy) other miscellaneous messages annotation Houdini debug annotations group Houdini main rendering group Message originated from the GLSL compiler, or other compiler window Message originated from the Window Manager (WGL, GLX, AGL) houdini Message originated from Houdini thirdparty Message originated from outside OpenGL, Houdini or Window Manager HOUDINI_OGL_PICKBUFFER_PATH For debugging viewport picking. Valid values are: default, error, ignore, always, module, once. If the variable is set, the assert_enabled() function returns true. Setting this variable will change the default color space for TARGA images to linear. A value of 3 will cause PDG to also print a message each time a work item's cache id is incremented or synchronized from its dependencies. HOUDINI_ABEKAS_LOGPASSWD Specify the password for logging into an Abekas frame recorder. Error levels are defined as follows: 1, message; 2, prompt; 3, warning; 4, abort operation; 5, fatal error. HOUDINI17_COMPATIBILITY When this is enabled, some of the backwards compatibility issues of Houdini 17.0 (and earlier) are turned on. Please see signal(5) for more information. The default value is 0. 2 Warnings will only be shown as graphical pop-ups when applications start up. If both the VISUAL and EDITOR variables are not set, then a default editor (Windows Notepad, Mac OS X Text Edit, Linux GEdit) is used. Currently, this applies to destroying nodes in Python while cooking. In Houdini 6.1 and later, two points are connected only if there is a sequence of edges within the soft radius that connects them. This can be specified as a single string containing four floating point numbers representing the red, green, blue and alpha components of the default color. HOUDINI_SOHO_PATH The path of directories used by soho, houdini, core, only fallback only to Houdini Core license. If HOUDINI_OCL_VENDOR is set, then once a platform vendor is identified, only devices of the specified type will be used. HOUDINI_PACKAGE_VERBOSE Enables the logging of messages to the console during package processing. Only built-in formats will be installed. This affects all of Houdini. HOUDINI_PYTHON_BIN Note This variable is no longer used. HOUDINI11_PERFORMON_COMPATIBLTY When this is enabled, clicking on the Windows > Performance Monitor menu entry will open the performance monitor that was available in Houdini 11.1 and earlier versions. If this variable exists, then its value will be output to the RIB stream. It is, by default, in the HOUDINI_PATH between HOME and HFS. HOUDINI10_COMPATIBILITY When this is enabled, some of the backwards compatibility issues of Houdini 10.0 (and earlier) are turned on. HOUDINI_SOP_DISABLE_COMPILENODE The Block End Compile SOP will always be non-compiled if this is set. On Windows, this will enable just in time debugging for debuggers such as Visual Studio. HOUDINI_OCL_IMAGE_ADVECTION The Gas Advect CL DOP tries to convert the velocity field to an image before performing the advection. HOUDINI_RUN_IN_FOREGROUND If set to 1, Houdini GUI applications will by default run as a foreground application, if run from a shell or a terminal. If this environment variable is set to zero in the underlying operating system via the command-line or registry, then the built-in driver will
